

FARMER HA The HAT that fits everyone

WHAT is Farmer HAT?

Farmers and doctors, it's a little like Venus and Mars.

They just don't go together - or not as often as they should.

The Farmer Health Assessment Tool (Farmer HAT) is free and effective online tool developed by the National Centre for Farmer Health to promote a safe farming business and healthy personal behaviours. It's an easy to use resource for farmers to access an immediate assessment of their overall health and wellbeing - plus a few valuable pointers about their own on-farm safety in the privacy of their own home.

WHAT is a Group Manager?

As Group Manager you will have the ability to invite producers to use the Farmer HAT, print out a group report of de-identified data and send reminder messages to your producers to share or update their self-assessment results.

The group report will highlight emerging issues to facilitate group discussions and embed relevant training and activities into your program that focus on making health, wellbeing and safety a core part of the success of their farming business.

WHY become a Group Manager?

Challenge your producers to question their current health, wellbeing and safety practices. Help them to overcome barriers to change and improvement. It's a spectacular resource; and it could be a lifesaver for one (or more) of your clients.

The process is easy. Your valuable time limited.

"I definitely see benefit in the information provided in the group report.... a reminder to all members that health and safety is just as important as other areas of farming." Best Wool Best Lamb Apsley/Edenhope member

"Can see a benefit from the group perspective. It serves as a focus for discussion within the group on how other people may deal with certain issues." Best Wool Best Lamb Apsley/Edenhope member

"Benefits of the group report can target areas that the group may need to tackle e.g. alcohol, hearing and maybe first aid."

HOW to become a Group Manager

STEP 1: Create a Group

- 1. Sign up to become a Farmer Hat User <u>www.farmerhealth.org.au/farmerhat</u>
- 2. Email the National Centre for Farmer Health (NCFH) on ncfh@wdhs.net requesting a Farmer HAT group. The request needs to include:
 - a. The group name
 - b. Industry Group type (e.g. sheep, beef, grain, horticulture, fishing)
 - c. Location and anticipated group number
- 3.The NCFH Farmer HAT Administrator will create group, appoint you as the Group Manager, and provide a Group Manager Operational Guide.
- 4. Invite members to join group through the Farmer HAT.
- 5. Encourage all group members to participate, complete self-assessment and share de-identified results. The de-identified data from results is used in a group summary report to highlight emerging issues for the group. Sharing of results is optional.

STEP 2: Health and Lifestyle Assessment Day (Optional)

- 1. Contact NCFH to arrange Health and Lifestyle Assessments for group members.
- 2. Assist with venue location and arrangements.
- 3. Contact group members encouraging participation in a Health and Lifestyle Assessment to obtain clinical health results and complete the Farmer HAT.
- 4. Provide NCFH with group member names email address and phone number of those wishing to participate.
- *Alternatively participants can visit their GP to check their blood pressure, blood glucose and cholesterol levels.

STEP 3: Group Reporting and Discussions

- 1. Create a de-identified group report and share with group.
- 2. Facilitate discussions with group to:
 - a. Identify common areas of concern/risk
 - b. Discuss and agree on actions to be taken
 - c. Incorporate relevant training and education into group programming
 - d. Contact NCFH to discuss education sessions (optional)
- 3. Follow up actions as needed.

STEP 4: Reminders

1. Send out a reminder (at least annually) to group members to update their assessment and repeat Step 2 (Optional) and Step 3.
